(54) Title: DATA CARRIER OR DOCUMENT CARRIER

(57) Abstract: In order to further develop an electrical or electronic data carrier or document carrier (100) as well as a method of communication, in particular for the contactless transmission and/or for the contactless exchange of data and/or of energy, between at least one base station or central station, in particular at least one read/write station, and at least one electrical or electronic data carrier or document carrier (100) in such a way that data and information cannot be read from the data carrier or document carrier (100) without the agreement, knowledge and/or assistance of the user or owner of the data carrier or document carrier (100), it is proposed that the data carrier or document carrier (100) can be moved to and from between a first position (A) defined as an unfolded or opened state and a second position (B) defined as a folded or closed state, and that the data carrier or document carrier (100) is coupled to the base station or central station essentially only in the first position (A) or essentially only in the second position (B) or essentially only in a position between the first position (A) and the second position (B).
